

CORNISH CONCRETE PRODUCTS LTD

GROUND BEAMS

Precast ground beams can significantly improve the construction programme by reducing the impact of poor or difficult ground conditions and providing a suspended foundation for the structure.

Due to prefabrication and subsequent speed of installation, precast ground beams allow for efficient programming and superstructure construction.

Ground beams can either be manufactured to the customer's design profile or by our own in-house design team.

Quicklay Ground Beams are manufactured in controlled conditions and can be installed in all weathers.

With contract periods diminishing, they give the contractor a competitive advantage in meeting contract deadlines that could not be achieved with insitu methods.

Cornish Concrete Products Ltd have a unique production system that allows ground beams to be manufactured without the use of expensive additional formwork and falsework systems and is yet flexible enough to meet the contract's bespoke needs.

Ground beams can be supplied either to the customer's design or if structural details are

supplied, they can be designed to meet your requirements.

They offer the chance to reduce contract times as they can be pre-ordered and then installed in a matter of days saving valuable time from the contract period.

Installation can be either by the main contractor, the groundwork contractor or by CCP's trained operatives.

If ground beams are to be visible then a fairfaced finish can be supplied.
